**Subject:** Concern Letter for Project on “Face Recognition Based Attendance Management System”

This is to certify that Moksh Sharma and Murli Manohar Soni, students of Jodhpur Institute of Engineering and Technology (JIET), Jodhpur, have undertaken a project titled “Face Recognition Based Attendance Management System using JavaScript and face-api.js.”

We, at Krishna Health Care Services, recognise the significance of this project as it aims to provide an intelligent web-based solution that captures faces in real time through a webcam, identifies individuals using stored face data, and automatically marks attendance in a centralised database. The solution will help us maintain accurate caretaker attendance, reduce manual errors, eliminate proxy entries, and streamline workforce management for better operational efficiency.

We confirm our interest and support for this project and authorise the students to carry out research and development work in alignment with the proposed problem statement.

We wish them great success in the successful completion of their project.

Sincerely,

**Pooja Soni**

Managing Director
